

Topic:
***“Equity in Local
Transportation Projects”***

September 28, 2022
12:00PM to 1:00PM

Presenters:

Richard Berger – Town of Apple Valley

Richard Berger has managed the entire lifecycle of projects in multiple public and private sector industries for 25 years, and he has served as a Capital Project Manager for the Town of Apple Valley since 2014. Richard’s diverse public sector portfolio includes managing traffic studies, signal upgrades and installation, roadway maintenance and repair, and the installation of wastewater infrastructure. He has managed multiple planning studies that have resulted in over \$10 million of improvements in the last five years. He has a passion for Safe Routes to School projects and connecting the underserved residents of Apple Valley to job and educational opportunities in Town and beyond.

Paul Van Dyk, T.E., RSP1 – City of Long Beach

A ten-year veteran of Long Beach’s Transportation Mobility Bureau, Paul is a Traffic Engineer responsible for coordinating the City’s mobility goals with all mechanisms available – roadway maintenance projects, grant funding, and private development. The City has declared ambitious goals of zero roadway deaths and a 30% bicycle mode share before he retires, so there is plenty of work to be done. When he’s not at City Hall, Paul can be found at regular meetings with the Public Works Surf Club, grabbing ice cream with his three kids in the family cargo bike, and leading ministries at his church in Paramount.
